Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments filed January 04, 2010 have been fully considered but they are not persuasive.

Applicant's principal arguments are:

a) Applicant's submit that the claimed amount of Li (0.9 to 0.98) is critical in which it exhibits the unexpected results shown in Table 1 of the specification (claim 3).

In response to Applicant's arguments, please consider the following comments.

a) Table 1, Example 4 shows a compound in which the amount of Lithium equals 0.85 which falls outside the claimed, significant range. The results for the compound of Example 4 such as the highest temperature, capacity retention ratio and voltage at flection point in discharge are very similar to the compounds which meet the limitations of claim 1. Therefore, the Applicant has not established the differences in results that are in fact unexpected and unobvious and of both statistical and practical significance. The burden is on Applicant to establish results that are unexpected and significant. See MPEP 716.02 (a) and (b).
